

GEDEX™ has acquired its first aircraft, a Cessna 208 Caravan. It has completed its Canadian registration and will begin test flying GeoMIM components in September. This aircraft was selected after conducting a review of various types which could provide the necessary cargo volume and desired operational and flight characteristics for our sensors.

GEDEX™ will set up an operational base at the Brampton airport, located approximately 25 minutes from the GEDEX™ offices.

Our hangar is equipped with office and laboratory space to support field operations and equipment testing.
